**DETAILED ACTION**

***Reasons for Allowance***

1. Claims 92-130 are canceled.
2. Claims 1-91 are allowed.
3. This is examiner's statement of reasons for allowance.

Regarding claims 1-24 the prior art, either singularly or in combination, does not teach or suggest an optical scanning module comprising:

a light-emission source configured to emit a light beam;

a movable mirror configured to reflect the light beam, the movable mirror being swingably supported by a rotary shaft; and

a movable mirror driving part that is configured to cause said movable mirror to oscillate in first and second opposite directions, wherein a frequency of pixel information supplied to said light-emission source varies in accordance with a primary scanning position of each pixel.

Regarding claims 25-36 and 71-80 the prior art, either singularly or in combination, does not teach or suggest an optical scanning module comprising:

a light-emission source emitting configured to emit a light beam;

a movable mirror configured to reflect the light beam, the movable mirror being swingably supported by a rotary shaft;

a movable mirror driving part that is configured to cause creases said movable mirror to oscillate in first and second opposite directions; and a variable frequency setting part varying, in accordance with an amplitude of said movable mirror, a frequency causing said light-emission source to emit light based on pixel information.

Regarding claims 37-48 and 81-91 the prior art, either singularly or in combination, does not teach or suggest an optical scanning module comprising:

a light-emission source configured to emit a light beam; a movable mirror configured to reflect the light beam, the movable mirror being swingably supported by a rotary shaft; and  
a movable mirror driving part that is configured to cause said movable mirror to oscillate in first and second opposite directions, wherein a light emission period forming one pixel on a scanned surface is varied with respect to a primary scanning direction to be minimized in a vicinity of a center of an image so that a light-emission interval between each of pixels forming pixel information is minimized in the vicinity of the center of the image.

Regarding claims 49-70 the prior art, either singularly or in combination, does not teach or suggest an optical scanning module comprising: a light-emission source configured to emit a light beam; a movable mirror configured to reflect the light beam, the movable mirror being swingably supported by a rotary shaft; and

a movable mirror driving part that is configured to cause said movable mirror to oscillate in first and second opposite directions, wherein a frequency of pixel information supplied to said light-emission source varies in accordance with a primary scanning position of each pixel.

The features identified, in combination with other claim limitations, are neither suggested nor discussed by the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
